Profilele AL comercializate de BALKAN RO sunt profile pentacamerele, fabricate in Grecia conform standardelor de calitate in vigoare. Profilele sunt extrudate din AL rigid, ignifugat, stabilizat la UV, cu fete plane si marcate la fabricație, protejate cu banda autoadeziva.

Profilele principale au o adancime de 60mm, etanșarea se realizează cu garnituri PCE inserate direct in canalul de garnitura in timpul procesului de extrudare. Garnitura se poate suda la aceeasi temperatura cu profilul si este bifunctionala, rezistenta la conditiile de mediu si la procesul de imbatranire. Totodata profilele BLK se încadrează in clasa A3 de permeabilitate la aer, respectiv E4 la etanseitatea la apa conform SR EN 12208;2002.

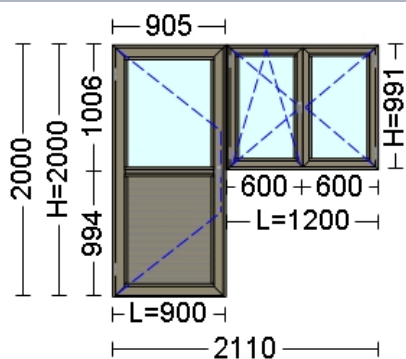

Izolatia termica, hidrofuga, si economia de energie este conforma cu prevederile din normativ C107/319-97, având un coeficient de transfer termic de 1,26-1,35W/mpK. Izolația acustica este foarte buna, anjurand la Ia >= 38dB. Siguranța la foc este caracterizata prin clasa de combustibilitate C2; dificil inflamabil conform STAS11357/90.

*NOTA: Pentru evitarea supraincalzirii aerului din incaperile situate pe est sau vest pe durata verii sau a pierderilor de energie in perioada sezonului rece va recomandam:

- folosirea unui geam termoizolant cu LOW E+ARGON
- folosirea unui profil cu un coeficient de transfer termic cat mai mic $k=1.2W/mp$
- pentru plasele de insecte latimea minima taxabila este de 850mm

ANTENTIE: la o cercevea cu latime mai mare de 850mm scade rezistenta acesteia si creste posibilitatea decalarii sticlei in timp direct proportional cu cresterea latimii

Prezenta oferta este calculata pe baza informatiilor prezentate de catre cumparator.

Transport si montaj incluse in pret.

Demontarea vechilor ferestre sau usi se face cu acordul cuparatorului.

Termen de executie orientativ: 2 saptamani.
